Storing data at a remote location online is known as cloud storage. When files and data are sent to the cloud, they are actually being sent to a server that is connected to the internet.

Files can be uploaded to a folder system and downloaded as required.

## Benefits:

- A cloud storage has many benefits over traditional physical storage methods, including more accessible data storage.
- Using cloud we can easily share files and collaborate with others.
- We backup our data to the cloud.
- No more extra HDD.
- Remotely access, update & sync files
- Keep files encrypted (secured with passwords).
- Storage is for lifetime.

## Disadvantages:

- We need internet connection all the times.
- Extra storage comes at a cost.
- Security and privacy might be compromised
- Security and privacy is a concern with companies providing cloud for free.
