

- Runtime error

Try Block: Lets you test a block of code for error.

Except Block: Lets you handle the error.

Finally Block: Lets you execute code, regardless of the result of the try-catch and except blocks.

Python:

```

try:
    print(x)
except:
    print("an exception occurred.")
finally:
    print("finally block executes anyway.")
  
```

undefined/undeclared.

Many exceptions:

```

{
  {
    try: print(x)
    except NameError:
      print("Variable x is not defined.")
    except:
      print("Something else went wrong.")
  }
}
finally:
  print("Code executed anyway.")
  
```
