

## Peer-to-Peer file sharing/ BitTorrent Protocol

- ① Content owner creates a .torrent file and uploads that to a torrent server.
- ② Server gets synced with a torrent search engine.
- ③ Torrent server updates trackers and link them to content creator's computer.
- ④ There are so many more computers get attached to owner's computer b/c of trackers.

- ① When a user searches a kw on torrent search engine.
- ② They are led to torrent server.
- ③ User gets a list of all computers having req. file.
- ④ And lastly user starts uploading/downloading req. file.
