Memories Primary Secondary (loaded to Primary) (Direct Accen) KAM 120 M -can be altered (changeable) - Can't altered -com be upgraced - Used when computer - hold the ols, currently is sterting (booting sunning programs and their - It trolds bootstrap - Used when computer is sterting (booting) loader program dater. - Smaller than RAM - Digger than ROM - Types: DRAM SRAM (Dynamic) (Static) (Cpu) -inside processor -outside procena - made up'C) - made up cf capacitors. Allp Hup circuits - recuires cont. -doesn't leak refreshing as - No additional growits to setrent memory leaks. So Size 15 tim. -chaper Itan - smaller detar SRAM. - Digger in Size Capacity.
- faster to accon. than SRAM. - Slower to accen
